

MARINE

BALLAST WATER MANAGEMENT SERVICES

Each year approximately 3 to 5 billion tons of ballast water are moved throughout the world. ABS Group can assist vessel owners, builders and operators in the development and implementation of ballast water management plans that are both efficient and cost effective.

Recognized as a leading service provider to the international marine community, ABS Group delivers a range of services that support responsible management of ballast water. Our experienced team can assist with all aspects of ballast water management, from pre-planning to system selection, site survey and installation.

BALLAST WATER MANAGEMENT SERVICES

ABS Group has the knowledge and experience to support clients with ballast water management, whether for one vessel or an entire fleet.

Project Planning Support

- Development of key project objectives such as quality and cost-efficiency
- Development of management plans as to operational and scheduling criteria for the vessel(s)
- Evaluation of project activities against Key Performance Indicators (KPIs)

Selection of the Management System

- Assessment of vessel or fleet composition as well as operational and life cycle stage
- Identification of available technologies and BWMS that are appropriate for the vessel/fleet
- Review of installation requirements and vendor and/or system specifications

Site Survey

- Analysis of BWMS design for optimal engineering
- Creation of detailed survey report covering design details, equipment locations and other operational considerations

System Commissioning

- Oversight of equipment installation
- Inspection of equipment so that it meets system and vendor requirements
